

**Stars of Materials Science 2017 with  
Cliff Brangwynne and Rod Priestley**

On April 1, 2017 over 500 people visited Princeton University to learn about polymers from Princeton Center for Complex Materials researchers. Members of the NSF funded MRSEC in Interdisciplinary Research Group 2 presented a multimedia demonstration, and lecture featuring audience participation. Rod Priestley and Cliff Brangwynne spent months developing the presentation that explained the basics of polymers, explained their career paths in science and even discussed their own MRSEC research on a level that a 5 year old to any adult could understand and appreciate.
